## **Hometown Art Project 2020**

**Dear Review Committee,**

**I am very excited about the opportunity to design and place a site specific sculptural work in North Richland Hills, Texas. I have family and friends in Texas and enjoy visiting as often as possible.**

**The site in North Richland Hills seems to be a very accessible, yet an intimate neighborhood location that benefits the entire community. I envision the piece for this community to be visually and personally very active. Visitors to the park will be able to walk under and around the towers and interface with the sculpture from within. Being located on the corner, with traffic, both pedestrian and by car, you will be able to see an extensive variety of views and experiences. I envision the piece to become an iconic landmark for the community. I generally sketch in model form for my works as it offers a better three dimensional relationship to the space. I have designed this piece to be light and fun loving, maybe an expression of pick-up-sticks, an erector set or just fun while still incorporating my signature elements of exploding “pixels”. Beyond the photos I have also included my resume and I encourage you to view the details of my web page: [EricSteinStudio.com](http://EricSteinStudio.com) to get more details about my work, theory and past commissions.**

**The sculpture, photos of my model, are presented in primer gray as I have not yet completed the colors of the work. I expect that the three towers will be one color and the two cylindrical tubes another color. My studio is prepared to order the steel, fabricate the work in 5 parts and transport the sections to Texas for final assembly.**

**I look forward to the opportunity to present a finished model and hearing back from the Committee soon.**

**Respectfully,**

**Eric Stein**
